

# Homework 5

NAME/S: \_\_\_\_\_ SCORE: \_\_\_\_\_

Subject: Quantum Mechanics I

Deadline: Wednesday 14 September 2022 (until the end of the day)

Credits: 20 points

Number of problems: 4

Type of evaluation: Formative Evaluation

- This homework consists of problems related to units 3 and 4 of the course.
- You may submit this assignment either individually or in pairs. Submitted assignments should have maximum two authors.
- Unless stated otherwise, write your answers in SI units, and consider all bolded quantities as vector quantities. Please highlight the answers.

## 1. (7 points) Angular momentum

- (a) Let  $L_x$ ,  $L_y$ , and  $L_z$  be the components of the orbital angular momentum operator  $\vec{L}$ . Calculate the value of the commutator:  $[L_x L_y, L_z]$ .
- (b) Suppose we have a spin- $\frac{1}{2}$  particle, whose quantum state can be represented by the eigenstates  $|\uparrow\rangle$  and  $|\downarrow\rangle$  of the  $S_z$  operator. Using the Pauli matrix  $\sigma_x$ , calculate a normalised eigenstate of the  $S_x$  operator with an eigenvalue  $-\frac{\hbar}{2}$ .
- (c) Calculate the normalised spin eigenfunctions of a system with two spin- $\frac{1}{2}$  particles. These are called singlet and triplet states, why?
- (d) Calculate the orbital angular momentum eigenfunction  $Y_\ell^m(\theta, \phi)$  in a quantum state for which the operator  $\mathbf{L}^2$  has an eigenvalue  $6\hbar^2$  and the operator  $\mathbf{L}_z$  has an eigenvalue  $-\hbar$ .

## 2. (4 points) Spin

Consider an electron in the spin state:

$$\chi = C \begin{bmatrix} 1 - 3i \\ 2 \end{bmatrix}$$

- (a) Determine the normalisation constant  $C$ .
- (b) Find the expectation values of  $S_x$ ,  $S_y$ , and  $S_z$ .
- (c) Find the uncertainties  $\sigma_{S_x}$ ,  $\sigma_{S_y}$ , and  $\sigma_{S_z}$ .
- (d) Are the results consistent with all three uncertainty principles?

**3. (4 points) Spherical harmonics**

- (a) Construct all the possible spherical harmonics,  $Y_\ell^m(\theta, \phi)$ , for  $\ell = 3$ .
- (b) Choose two of them and check that they are normalised and orthogonal.
- (c) Using your favourite programming language, make 3D plots of all of them.

**4. (5 points) Hydrogen atom**

- (a) Construct all the possible spatial wave functions,  $\psi_{nlm}(r, \theta, \phi) = R_{nl}(r)Y_\ell^m(\theta, \phi)$ , of the hydrogen atom for  $(n, \ell, m) = (2, 1, m)$  and  $(n, \ell, m) = (4, 2, m)$ .
- (b) Using your favourite programming language, make density plots of all of these states.
- (c) Calculate the energy levels of these states in units of eV.
- (d) In terms of the Bohr radius, find  $\langle r \rangle$ ,  $\langle x \rangle$ ,  $\langle r^2 \rangle$  and  $\langle x^2 \rangle$  for an electron in the ground state of hydrogen.
- (e) Find  $\langle x^2 \rangle$  in the states  $(n, \ell, m) = (2, 1, m)$  and  $(n, \ell, m) = (4, 2, m)$  with the highest possible value of  $m$  allowed in each of them.
